

As a frequent user of the Amateur 3.5, 7.0, 10.1, and 14.0 MHz bands, I feel that the new 5.3 MHz allocation should be set in place with the following criteria:

1500W limit, although a 500W limit would be acceptable

Open to all amateur modes

Open to all licensees, General and above

Segmented at 5325, CW and narrow below, SSB and wide above

Thank you for the opportunity to comment
